DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, Group I, drawn to semiconductor device, classified in class 257, subclass 347.
 - II. Claims 7-27, Group II, drawn to method of making, classified in class 438, subclass 311.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the silicon-on-insulator wafer can be made by other method including: implanting oxygen ions into a semiconductor substrate to form an SIMOX, instead of bonding; forming isolation structure extending from the surface of the active layer to the insulating film formed SIMOX; follows by selectively implanting dopant into a portion of the active layer to form well region.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2814

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
